Dear Neighbor:

You may have noticed increased activity at our storage facility. SoCalGas is performing required bi-annual well inspections according to requirements from our state regulatory agency, CalGEM ((California Geologic Energy Management Division). Some of these inspections are also occurring on well sites within our easement west of Culver Blvd and north east of Jefferson Blvd.

In association with these inspections you may notice a tall work over rig, storage tanks and construction equipment. At some locations we may erect sound walls to mitigate any excessive noise that could be a disturbance.

Working hours for this activity are from 8 am to 4 pm. Monday thru Friday. No work will take place on weekends or holidays. It will take approximately 10 weeks to complete an inspection, then the workover rig and equipment will move to the next well. This process will occur until all wells are inspected.

This maintenance work is in accordance with environmental requirements and is not an expansion of our facilities.

We appreciate your understanding during this period and apologize for any inconvenience this may cause. If you have any questions, feel free to contact me at the above indicated numbers or e-mail address.

Sincerely,

Mike Harriel  
Sr. Public Affairs Manager
